

Day.One

After teaming up with Philips to launch the LightCollector app <https://www.light-collector.com/> we then collaborated with Concord Lighting to create the One Beam of Light <http://onebeamoflight.com/> competition and exhibition. Now lots of people have been asking us what we are going to do next that the lighting community can get involved in. Well here is the answer...

Our next 'Collective' project is taking place in April 2014 in Mexico City. We have formed a partnership with Mexican Lighting Designer Magali Mendez, Director of Saas Lighting www.saas-lighting.com and are currently working on our plans for an alternative lighting festival: Day.One.

The world is full of lighting festivals...Lyon, Frankfurt, Sydney, Singapore, Montreal, Turin, Amsterdam, York, Durham etc. They all take place at night and focus on artificial light so we think its time to turn things on their head and hold one in the daytime. Join us for a celebration of natural light and architecture, for the worlds first gathering of daylight and sunlight art in April 2014.

The event will be made up of natural light installations, architectural visits, an international sky experience, a manufacturers technology expo, a series of talks, film showings and community workshops. Many of these will take place at Casa Luis Barragan <http://www.casaluisbarragan.org/>, the private residence of Mexico's most celebrated architect and a master of natural light and colour. Some of the installations will be commissioned and paired with a manufacturer for materials.

Day.One compliments Noche.Zero http://www.lightcollective.net/do/project_detail/noche_zero, the darkness experience we co-organised with DiaV in the Atacama desert in Oct 2012.

We want to hear from you if you have a piece of work that fits, want to make one, have any other ideas or are interested in contributing or supporting in some way.

Our Day.One Festival is programmed for April 2014.
